Fun with array notation and programmatic variable assignment

Adám Brudzewsky

💡 Array Notation?

| | | |
|-----|-------|----------|
| [| (| (|
| 'a' | 'eh' | a: 'eh' |
| 'b' | 'bee' | b: 'bee' |
|] |) |) |

| | |
|---------------|-----|
| ['a' ♦ 'b'] | () |
|---------------|-----|

Traditional code

▽ `seq ← Range (from step to)`
`seq ← from, from + step × 1, step ÷ 2 to - from`

▽

```
          Range 10 2 18
10 12 14 16 18
```

Traditional code

```
▽ seq←Range args;from;step;to
  :Select ≠args
  :Case 3 ◇ (from step to)←args
  :Case 2 ◇ (from step to)←1(↑,1,↓)args
  :Case 1 ◇ (from step to)←0 1,args
  :EndSelect
seq←from,from+step×1step÷~to-from
```

▽

Traditional code

▽ `seq ← Range args; from; step; to`

`(from step to) ← (58 ρ args, 0 1) [41 12 58]`

`seq ← from, from + step × ⍒ step ÷ ⍒ to - from`

▽

Traditional code

```
▽ seq ← Range args; from; step; to  
  (from step to) ← (58 ρ args, 0 1) [41 12 58]  
  seq ← from, from + step × ⍒ step ÷ ⍒ to - from
```

▽

```
          Range 10 18  
10 11 12 13 14 15 16 17 18
```

Parameter namespace argument

```
▽ seq ← Range params ; from ; step ; to  
  (from step) ← 0 1  
  □THIS □NS params  
  seq ← from , from + step × 1 step ÷ ~ to - from
```

▽

```
  p ← □NS 0  
  p.from ← 10 ◊ p.to ← 18  
  Range p  
10 11 12 13 14 15 16 17 18
```

Parameter namespace argument

```
▽ seq ← Range params ; from ; step ; to  
  (from step) ← 0 1  
  □ THIS □ NS params  
  seq ← from , from + step × 1 step ÷ ~ to - from
```

▽

```
      p ← (from:10 ♦ to:18)  
      Range p  
10 11 12 13 14 15 16 17 18
```

Parameter namespace argument

```
▽ seq ← Range params ; from ; step ; to  
  (from step) ← 0 1  
  □ THIS □ NS params  
  seq ← from , from + step × 1 step ÷ ~ to - from
```

▽

```
          Range(from:10 ♦ to:18)  
10 11 12 13 14 15 16 17 18
```

Parameter namespace argument

▽ `seq ← Range params ; from ; step ; to`

```
□ THIS □ NS (from:0 ♦ step:1) params
seq ← from, from+step×1 step÷~ to-from
```

▽

```
Range(from:10 ♦ to:18)
```

```
10 11 12 13 14 15 16 17 18
```

Parameter namespace argument

▽ seq ← Range params

```
ns ← □ NS (from: 0 ◊ step: 1) params
```

```
seq ← ns. (from, from + step * ι step ÷ ∼ to - from)
```

▽

```
Range (from: 10 ◊ to: 18)
```

```
10 11 12 13 14 15 16 17 18
```

Parameter namespace argument

▽ seq ← Range params

```
ns ← (from: 0 ◊ step: 1) □ NS params
```

```
seq ← ns . (from, from + step * i, step ÷ ~ to - from)
```

▽

```
Range(from: 10 ◊ to: 18)
```

```
10 11 12 13 14 15 16 17 18
```

Parameter namespace argument

▽ seq←Range params

```
seq←((from:0 ♦ step:1)□NS params).(from,from+s
```

▽

```
Range(from:10 ♦ to:18)
```

```
10 11 12 13 14 15 16 17 18
```

Parameter namespace argument

▽ seq ← Range params

```
seq ← (
```

```
  from: 0
```

```
  step: 1
```

```
) □ NS params) . (from, from + step * 1 step ÷ ~ to - from)
```

▽

```
Range(from: 10 ♦ to: 18)
```

```
10 11 12 13 14 15 16 17 18
```

Parameter namespace argument

▽ seq ← Range params

```
seq ← (  
  from: 0  
  step: 1
```

```
) □ NS params). (from, from + step × 1 step ÷ ~ to - from)
```

▽

```
Range(from: 10 ♦ to: 18)
```

```
10 11 12 13 14 15 16 17 18
```

Parameter namespace argument

▽ seq ← Range params

```
seq ← (
```

```
  from: 0
```

```
  step: 1  a must be positive
```

```
) □ NS params). (from, from + step * 1 step ÷ ~ to - from)
```

▽

```
Range(from: 10 ♦ to: 18)
```

```
10 11 12 13 14 15 16 17 18
```

Parameter namespace argument

```
Range ← { ( (
  from: 0
  step: 1  a must be positive
) □ NS ω) . (from, from + step × ι step ÷ ∼ to - from) }
```

```
Range(from: 10 ♦ to: 18)
10 11 12 13 14 15 16 17 18
```

💡 Programmatic assignment?

```
'ns1' []NS 'v1' 'v2'
```

```
[]NS ns2
```

```
{ns $\alpha$ , ' $\omega$ '}/"nv1 nv2"
```

```
names{ns $\alpha$ , ' $\omega$ '}"vals"
```

```
ns1 []NS 'v1' 'v2'
```

```
[]NS ns2 ns3 ns4
```

```
ns []VSET nv1 nv2
```

```
ns []VSET ( $\uparrow$ names)vals
```

```
() []VSET ...
```

💡 Programmatic retrieval

`vals ← ns ⚡ names`

`vals ← ns □VGET names`

`nvs ← {ω(⚡ ω)} □NL -2`

`nvs ← □VGET -2`

`(names vals) ← {ω(⚡ ↓ω)} □NL 2`

`(names vals) ← □VGET 2`

Import to namespace

```
200↑⇒GET '/d/aplde2025a/people.csv'
```

```
first, last, sex, dob, address, city, country
```
